

PreNova AI — Company Preparation DSA Master Question Bank

247 DSA questions for company-focused interview preparation. This master bank combines the 17-company practice PDFs you already requested with additional standard interview problems so your Company Preparation module has a much larger question pool.

Companies covered: Accenture, Adobe, Amazon, Apple, Atlassian, Flipkart, Goldman Sachs, Google, Infosys, Meta, Microsoft, Netflix, Oracle, TCS, Uber, Wipro, Zomato

Important: the company tags in this document are based on the existing company practice pack. They represent preparation relevance, not a guarantee that a company will ask that exact problem. Interview questions vary by role, level, location and interview cycle.

How to Use This Bank

1) Start with Easy problems to learn patterns. 2) Solve Medium problems under a time limit. 3) Use Hard problems after mastering the underlying pattern. 4) For every solution, explain brute force, optimized approach, time complexity, space complexity and edge cases. 5) After solving, practice a small variation of the same pattern.

Recommended Company Preparation Workflow

Choose the target company → select your role (e.g., SDE/Frontend/Backend/Full Stack) → prioritize the company's high-frequency patterns → solve Easy → Medium → Hard → take timed tests → review wrong answers → repeat weak topics → run a mock interview using the same company and role.

For the PreNova AI Company Preparation module, this bank can be stored as a question collection with fields such as company, role, topic, difficulty, platform link, tags, solved status, score, attempts and last-practiced date.
